XX AAD05300-AAD05379 represent cDNAs corresponding to 28 human secreted protein genes, and AAE0145-AAE01513 represent the proteins they encode. CC AAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the emount of the new protein in a sample or by determining the presence of amount of the new protein in a sample or by determining the presence of amount of the new protein in a sample or by determining the presence of amount of the new genes. Specific uses are described for each of the proliferative disorders; cancer, tumours foctal and developmental proliferative disorders; disorders, diseases of the immune system, allory autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allory autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allory accorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, schizophrenia asthma, complicated disorders, pregnancy-related disorders, and infections. The proteins can also be used to aid wound disorders, and infections. The proliferation, to prevent skin aging due to cannow a formary tissues, to regenerate tissues, to identify their culture of primary tissues, to regenerate tissues, to identify their contrure of primary tissues, to regenerate tissues, to identify their contrure of primary tissues, to regenerate tissues, to identify their conducts specific for a protein of the invention can be used in antidodes specific for a protein of the invention can be used in antidodes specific for a protein of the invention can be used in mannoscribent assay (ELISA). The present sequence represents a human control of the invention.
                                                                                                                                                                                                                                 New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TRGTTLMKLTEDREQIRQGLEELGKVLPGGDTYMHEGFERASEQIYYENRQGYRTASVII 120

AAD05300-AAD05379 represent CDNAs corresponding to 28 human secreted protein genes, and AAE01436-AAE01513 represent the proteins they encode. AAE01514-AAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the

mutations in the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 28 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tummours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, allergies, neurological disorders (e.g., Theumatold arthritis), inflammation, allergies, neurological disorders, (e.g., Alzheimer's disease, Rarkinson's disease), cognitive disorders, schizophrenia, asthma, skinson's disease), cognitive disorders, schizophrenia, atheroscierosis, cardiovascular disorders, angiogenic disorders, and infections. The proteins can also be used to aid wound the protein and epithelial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell colluture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in remotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in diagnostic immunosasays e.g., radioimmunosasay or enzyme linked imvance secreted protein of the invention.

AAB01422

AAB01422 standard; Protein; 333 AA 20-OCT-2000 (first entry) Human TANGO 197. AAB01422; 

TANGO, 128; 140; 197; 212; 213; 224; 239; modulating agent; asthma; graft versus-host diseases; Theumacioid arthritis; psoriasis; inflammatory bowel disease; septic shock; ulcerative colitis; Crohn's disease; chronic myelogenous leukemia; cancer; liver disease; chronic myelogenous leukemia; cancer; liver disease; doughth's disease; obstearthritis; lyme's disease; cachexia; autoimmune disease; myasthemia gravis; autoimmune diabetes; systemic lupus erythematosus; transgenic animal; diagnosis; prognosis; prophylatic; therapeutic; human.

Homo sapiens

Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, Theumatoid arthritis, postiasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chiseases e.g. myasthemia gravis, autolimmune disbetes and systemic diseases e.g. myasthemia gravis, autolimmune disbetes and systemic lupus erythematosus. The nucleic acids are also useful for producing lupus erythematosus. The nucleic acids are useful in TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in forensic biology, for diagnostic assays, prognostic assays, prognostic assays, prognostic assays, prognostic assays, prognostic assays, prognostic assays, complements and for monitoring clinical trials. TANGO colypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a disorder associated with aberrant TANGO expression. The invention relates to human nucleic acids (AALS7798-AAL61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful immunosuppressant and cytostatic activity. The polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinininin activity, chemotactic/chemokinetic activity, haemotactic/chemokinetic activity, haemotactic/chemokinetic activity, arthritis and inflammation, leukaemias and assays for receptor activity, arthritis and inflammation, leukaemias and

The present invention describes primer sets for synthesising 5602

(cf. 1111-length cDNAs defined in the specification. Where a primer set

(cf. 1111-length cDNAs defined in the specification. Where a primer set

(comprises: (a) an oligo-dT primer and an oligonucleotide comprises one of

(comprises) to the complementary strand of a polynucleotide which comprises one of

(complementary strand of a polynucleotide which comprises a 5'-end

(complementary strand of a polynucleotide which comprises a 5'-end

(complementary strand of a polynucleotide which comprises a 5'-end

(complementary strand of a polynucleotide which comprises a 5'-end

(complementary strand of a polynucleotide comprises a 5'-end

(complementary strand of a polynucleotide comprises a 6'-end

(complementary strand of a polynucleotide suddence, where the

(complementary strand of a polynucleotides and the complementary to a

(complementary strand of a polynucleotides and the complementary to a

(complementary strand of a polynucleotides and the specification. The primers as 1'-end sequence is selected from those defined in

(complementary strand) the primers are useful for synthesising polynucleotides,

(complementary full-length cDNAs. The primers are also useful for the

(complementary full-length cDNAs. The primers are also useful for the

(complementary strand any specialised methods. AAH03166 to AAH13638 and

(complementary specialised methods. AAH03166 to AAH13632

(complementary strand amino acid sequences; and AAH13632 to AAH13632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Wilebrand factor-associated disorder, requiate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, cand hematopoietic associated diseases and disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral coopenal toxy propressions of disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a human TANGO 216 polypeptide. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular random indulate cellular differation, modulate cellular differation, modulate cellular differation, modulate cellular andresion, and cell trafficking and/or migration, would cellular interactions, modulate cell adhesion in proliferation, modulate cellular interactions, modulate cell adhesion in proliferation, disorders, such as cancer, modulate the proliferation, differentiation of cells that appear in the bone marrow, and leukcoytes, cand/or function of cells that appear in the bone marrow, and leukcoytes, cellular interactions, plood and hematopoietic associated diseases and disorders, spleen associated diseases, modulate renal disorders, treat certoints, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the cardiovascular disorders such as ischemic heart disease, modulate the disorder. They may also be used to treat disorders associated diseases or collise, cerebral coedma, hydrocephalus, brain herniations, iatrogenic constrince, cerebral coedma, hydrocephalus, brain herniations, iatrogenic constrince, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, disperser.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel human and murine secreted proteins designated TANGO 216, 261, 266, 266 and 267 useful as modulating agents of cellular processes.
                                                                                                                                                                                                "von Willebrand factor A domain"

AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, modulate cellular interactions, modulate cell trafficking and/or migration, modulate cellular adhesion in proliferation disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood
Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of ceilular processes,
                                                                                                                                                                                                                                  Disclosure; Page -; 175pp; English.

               pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, toxoplasmosis, parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

```
AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO COLULAR DESCRIBERATION, modulate pollyleration, modulate pollyleration, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, modulate cell adhesion in proliferation, modulate cellular interactions, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary conquesting congestion or oedema, emphysema, chronic bronchitatis, bronchial associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disorders, treat cardiovascular disorders such as ischemic heart disorders, treat cardiovascular disorders such as ischemic heart disorders, treat cardiovascular disorders associated diseases of disorder. They may also be used to treat disorders associated with the ovaries, and cerebral codema, cartilage associated diseases of disorder. They may also be used to treat disorders associated with the ovaries, and cerebral codema, concephalus, brain meniations, iatrogenic disease, inflammations, brain meniations, iatrogenic disease, inflammations, brain meniations, iatrogenic disease, inflammations, brain meniations, and treat hepatic disorders.

Coorplessmosis, Parkinson's disease, multiple sclerosis, brain ceres, interact hepatic disorders, once the present sequence does not appear in the specification; it was note: the present sequence does not appear in the parelication; it was note: the present sequence does not appear in the present sequen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               'n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120 IALTDGELHEDLFFYSEREANRSRDLGAIVYCVGVKDFNETQLARIADSKDHVFPVNDGF 179

                                                                                            The invention relates to isolated nucleic acid molecules encoding novel human secreted extracellular matrix proteins (SPS). The novel human secreted extracellular matrix proteins (SPS). The polynucleotides and proteins are used to prevent, treat a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For example, disorders associated with decreased expression of SPS. The SP polynucleotide or a vector expressing them may be administered to treat diseases by gene therapy. Antisense molecules may be administered to down regulate expression of SPS by binding with the cells own genes and preventing their expression. The polynucleotides may also be used as DNA probes in diagnostic assays. The SPS may also be used antagonists) of the SPS. The anti-(SP) antibodies and antagonists may also be used to down regulate expression and activity of the Administry of antagonists may also be used to down regulate expression and activity of the Administry of antagonists and antagonists of the SPS in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The disorders include for example: immune/autoimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of the breast or liver, Sezary syndrome and Gaucher's disease), neurological diseases (e.g. Alzheimer's disease.

Parkinson's disease) cardio-/cerebrovascular disorders (e.g. cardiac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     arrest, tachycardia and angina), infections caused by bacteria, viruses and fungi and ocular disorders (e.g. corneal infections). Other uses include wound healing, maintenance of organs before transplantation,
                                                                                                                                                                                                                                                                                Nucleic acid molecules encoding human secreted extracellular matrix proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and Parkinson's diseases and cancers -

The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any won Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes,
                                                                                                                                                                                                                                                                                                                              cellular proliferation, cellular differentiation, cellular adhesion, von Willebrand factor-associated disorder, cell trafficking, cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -

AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO clother beginning to bolypeptides can be used to modulate cellular proliferation, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, addlate cellular interactions, modulate cell adhesion in proliferation, addlate cellular interactions, and hematopoietic associated diseases and disorders, atelectasis, that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or cedema, emphysema, chronic bronchitis, bronchial sthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate the proliferation, differentiation, as ischemic heart diseases, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases with the ovaries, and cerebral oceana, corporations, brain herniations, iatrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral toxophylasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

CC hydrocephalus and encephalitis, and treat hepatic disorders.

note: the present sequence does not appear in the specification; it was created using information provided.
                                                             TANGO 266; TANGO 216;; TANGO 261; TANGO 262; TANGO 267; CACULUAR PROLÍFICATION: CELLULAR defiferation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectasis; pulmonary congestion; hematopoietic associated disease; atelectasis; pulmonary congestion; intestinal emphysema; chronic bronchita; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; Alzheimer's Disease; cerebral toxoplasmosis; parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Fraser CC;

AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated adisorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular adhesion, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pronchial pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TANGO 266; TANGO 216;; TANGO 261; TANGO 267; cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; hydrocephalus; Alzheiner's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.

nucretic actus actudating cellular processes like asthma, graft versus-host diseases, rheumatord arthritis, psoriasis, inflammatory versus-host diseases, rheumatord arthritis, psoriasis, inflammatory versus-host diseases, rheumatord arthritis, psoriasis, inflammatory cornus-host disease, septic shock, ulcerative colitis, croin's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme's disease, cachexia and autoimmune disease, osteoarthritis, Lyme's disease, cachexia and autoimmune classes e.g. myasthemia gravis, autoimmune diabetes and systemic liseases e.g. myasthemia gravis, autoimmune diabetes and systemic cransgenic animals and the TANGO polypeptides themselves. Partial rangonic animals and the TANGO polypeptides themselves. Partial cransgenic animals and for diagnostic assays, prognostic assays, coparamacogenomics and for monitoring clinical trials. TANGO plypeptides are suitable for both prophylactic and therapeutic polypeptides are suitable for both prophylactic and therapeutic disorder associated with aberrant TANGO expression. A wide range of cellular disorders can be treated.
                                                 Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   161 QLARIADSKDHVFPVNDGFQALQGIIHSILKKSCIEILAAEPSTICAGESFQVVVRGNGF 220
